**What the
next?**

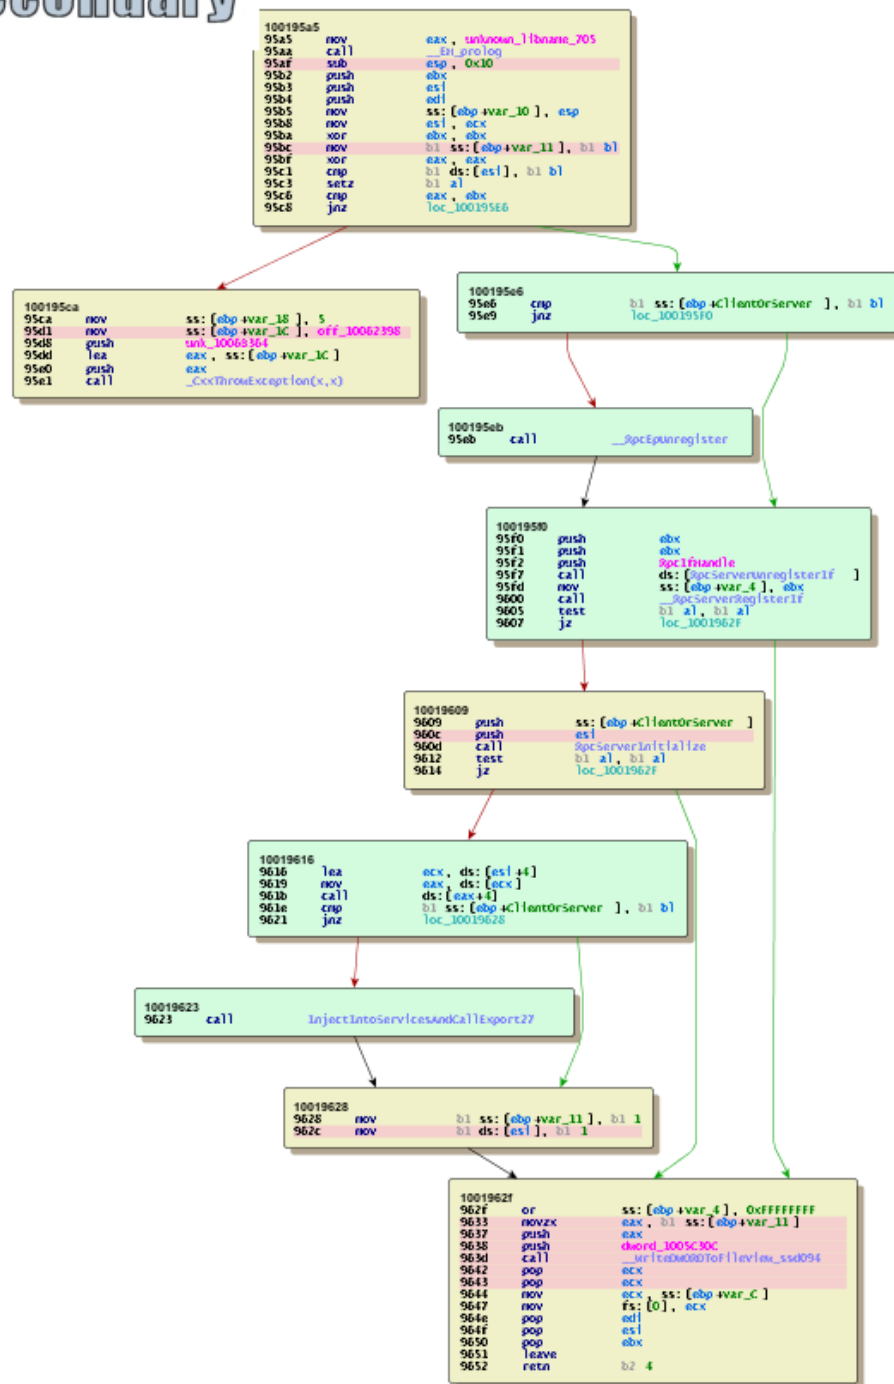

Duqu infection scheme

primary

secondary

RPC Function	Stuxnet	Duqu
Rpc 1 – return version of the worm	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Rpc 2 – load module in into a new process and execute export function	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Rpc 3 – load module into existing process and execute export #1	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Rpc 4 – load module in a process and execute its entry point	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Rpc 5 – Build the worm dropper	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Rpc 6 – run specified application (calling CreateProcess API)	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Rpc 7 – read data from specified file	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Rpc 8 – write data into specified file	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Rpc 9 – delete specified file	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Rpc 10 – work with target files	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

Finding exact date of infection

```
EnterCfgData(&CfgMutex);
v8 = 0;
bDeleteItself = GetConfigBuffer()->bCheckSelfDelete;
v8 = -1;
result = LeaveCfgData(&CfgMutex);
if ( !bDeleteItself )
{
    EnterCfgData(&_CfgMutex);
    v8 = 1;
    EnterCfgData(&CfgMutex);
    LOBYTE(v8) = 2;
    v3 = GetConfigBuffer();
    v4 = GetConfigBuffer();
    bTimeElapsed = IsTimeElapsed(&v4->InfectionDate, v3->DaysToLive); // check time to remove itself from the system
    LOBYTE(v8) = 1;
    LeaveCfgData(&CfgMutex);
    v8 = -1;
    result = LeaveCfgData(&_CfgMutex);
    if ( bTimeElapsed )
        result = InjectAndExecuteExportFunction(2, 0); // call export 2 (remove itself from the system)
```

Config decryption algorithm

```
|def decrypt(data):  
    gamma = [0x2b, 0x72, 0x73, 0x34, 0x99, 0x71, 0x98, 0xAE]  
  
    a = 0  
    for ix in xrange(len(data)):  
        data[ix] ^= gamma[a]  
        a = a + 1  
        if a == 7:  
            a = 0
```

Finding date in UTC format
